### ***Specification***

1. The disclosure is objected to because of the following informalities: Page 1, Line 4: The patent number of this application is now known and should be included.

Appropriate correction is required.

### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-8, 10-18, and 20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No. 6,335,688. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patented claims pertain to airport

security while the applied claims pertain to building security, thereby rendering the applied claims broader than the patent.

4. Claims 1-8, 10-18, and 20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,674,367. Although the conflicting claims are not identical, they are not patentably distinct from each other because the applied claims do not mention a law enforcement detention means, rendering the applied claims broader than the patent.

5. Claims 9 and 19 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,674,367 in view of **Loosmore et al** [U.S. 5,682,142]. The system taught by **Sweatte** includes the claimed subject matter as discussed above, however, there is no mention of a retinal scan as positive identification.

The use of a retinal scan as positive ID is not new in monitoring personnel. The control system/network taught by **Loosmore** includes biometric information such as a retinal scan on the tags carried by personnel. This is plain evidence that retinal scans have been used in identification for some time. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include a retinal scan as identification means for the purpose of using a common and well known ID method.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

**Kawamata** [U.S. 6,338,041] uses tag readers and speakers for a passenger management system.
